

Ilia Khlestkin

Product Designer · UX/UI Designer

About

I'm a product designer with an analytical mindset, specializing in product development for large companies. I have over 5 years of experience developing cross-functional products that are used by millions of people. My passion is to simplify overcomplicated systems and make them convenient for anybody.

Approach

My design approach is based on human centered design. I always try to start with customer's needs and put it in front of my workflow. And to systematize the process, I focus on the Double Diamond framework. It allows me to move step-by-step in order to find the best solution for any problem.

Skills

Product Design · UX/UI · Design Systems · Management
Strategic Thinking · Collaborative Work · CJM · Usability
Testing · Research · JTBD · Prototyping · Metrics ·
Mentoring · Scrum/Agile · Illustration · Animation

Experience

Senior Product Designer · Avito

24.10.2023 – 21.09.2026

Avito is the world's largest classifieds service. The company has 60M+ users per month, with users making 120+ transactions every minute. My responsibility is to create the most convenient scenario of buying and selling items, selecting the most relevant, sizing and checking them for originality.

- My new design of authentication has already increased the number of original items in the Premium section by 80K+, and reduced product support costs.
- I created a personalized filter design based on users' sizes and preferences. This increased product liquidity and accelerated sales for many sellers.
- I systematized the sizing of clothes between sellers and buyers. This decreased amount of returns and negative feedback from sellers due to giving the wrong size.

Middle Product Designer · Alfa Bank

01.07.2022 – 06.10.2023

I took part in the development of a B2B banking app. My main goal was to simplify all the service plans functionality and decrease negative impact on loyalty of our clients.

- The new design allows customers to purchase a subscription to get rid of transaction fees for a small charge. It increased the bank's revenues by 10%.
- With the redesign of the tariffication system, I was able to reduce the number of negative reviews and create a consistent scalable product across all platforms.

Junior Product Designer · Alfa Bank

10.01.2022 – 01.07.2022

Alfa-Bank is the largest of the private banks in Russia, leading in all banking segments for 30 years, within 26.5M customers.

I was focused on e-signature for small business and individual entrepreneurs. I made a way of saving money for company by using centralized system of e-sign instead of sms messages for proving all the operations for our customers.

- I designed the e-signature functionality, which is already used by about 500K users, and it saves \$2.8M+ a year.
- The scalability of the feature allows it to be used as a cross-functional fully secured e-signature.
